AUTOMATION FOR
EVERYDAY BUSINESSES

JOBES TECHNOLOGY SOLUTIONS

ROBOTIC PROCESS AUTOMATION

CHALLENGE:

Processes in most companies without RPA are inefficient, costly, and can be extremely repetitive. Data not only needs to be manually entered, but it also needs to be sorted and searchable. Data that is needed in multiple places within a process will also need to be manually imported from one system to another.

VALUE:

Robots or “bots” are programable machines capable of carrying out a series of actions autonomously or semi-autonomously. Robotic Process Automation (RPA) is a technology platform for training, deploying, and orchestrating software robots for automating digital processes that traditionally require complex integrations or manual effort. RPA solutions can be deployed in only weeks, leading to a lower cost of implementation and quicker return than traditional systems integration.

BENIFITS:

- Reduce Errors
- Save Time
- Decrease Costs
- Reduce Labor
